CEQA Initial Study - Environmental Checklist Form (Based on the State CEQA Guidelines, Appendix G Rev. March, 2010)

1. Title; Project Number(s); Environmental Log Number:

Dimitri, Diffendale and Kirk Minor Subdivision; 3200 21075 (TPM); 3910 11-02-007 (ER)

2. Lead agency name and address:

County of San Diego, Department of Planning and Land Use 5201 Ruffin Road, Suite B, San Diego, CA 92123-1666

- 3. a. Contact: Diane Buell, Project Manager
 - b. Phone number: (858) 694-3721
 - c. E-mail: Diane.Buell@sdcounty.ca.gov
- 4. Project location:

Assessor Parcel Number: 124-351-51; Monserate Hill Road/Monserate Place in the Fallbrook Community Planning Area, within unincorporated San Diego County.

Thomas Brothers Coordinates: Page 1048, Grid E/4

5. Project Applicant name and address:

Mark Kirk, 349 E. Alvarado Street, Fallbrook, CA 92028

6. General Plan Designation

Community Plan: Fallbrook

Land Use Designation: Semi-Rural Residential (SR-2)

Density: 1 du/ 2, 4, 8 acre(s)

7. Zoning

Use Regulation: Limited Agricultural (A-70)

Minimum Lot Size: 2 acres Special Area Regulation: N/A

8. Description of project

The project is a minor subdivision of a 10.39-acre parcel that would create 4 parcels, ranging in size from 2.31 to 3.13 gross acres (net acres ranging from 2.0 to 2.6). The project site is located near Monserate Hill Road/Monserate Place in the Fallbrook Community Planning Group, within unincorporated San Diego County. The site is subject to the General Plan Regional Category of Semi-Rural Lands, Land Use Designation Semi-Rural Residential 2 (SR-2), which is a slope dependent category. There is one 0.34-acre area that is considered steep slope which will be placed in an open space easement but the slope analysis for the overall property shows that the average slope is less than 25% for each proposed parcel. Zoning for the site is A70, Limited Agricultural. Access would be provided by a proposed 40' wide private road connecting to Monserate Hill Road. Each lot would be accessed by a private driveway off of the proposed private road ending in a cul-de-sac. The project would be served by on-site septic systems and imported water from the Rainbow Municipal Water District (water). Earthwork will consist of 5,335 cubic yards of cut and 4,606 cubic yards of fill resulting in an export of 729 cubic yards of material.

9. Surrounding land uses and setting (Briefly describe the project's surroundings):

The surrounding land uses are single-family residential and agricultural. The topography of the project site and adjacent lands is relatively hilly. The site is, for the most part, higher than the surroundings lands. The site is located 0.3 miles from Pala Road/State Route 76 (SR-76).

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

Permit Type/Action	Agency
Tentative Parcel Map	County of San Diego
County Right-of-Way Permits Construction Permit Excavation Permit Encroachment Permit	County of San Diego
Grading Permit	County of San Diego
Improvement Plans	County of San Diego
Remandment of Relinquished Access Rights	County of San Diego
State Highway Encroachment Permit	CalTrans
National Pollutant Discharge Elimination	RWQCB

System (NPDES) Permit	
General Industrial Storm water Permit	RWQCB
General Construction Storm water	RWQCB
Permit	
Waste Discharge Requirements Permit	RWQCB
Septic Tank Permit	County of San Diego
Water District Approval	Rainbow Municipal Water District
Fire District Approval	North County Fire Protection District

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED: The environmental factors checked below would be potentially affected by this project and involve at least one impact that is a "Potentially Significant Impact" or a "Less Than Significant With Mitigation Incorporated," as indicated by the checklist on the following pages.

Ae	sthetics	Agriculture and For Resources	rest Air Quality	
Bic	ological Resources	Cultural Resources	Geology & Soils

INSTRUCTIONS ON EVALUATION OF ENVIRONMENTAL IMPACTS

- 1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, Less than Significant with Mitigation Incorporated, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4. "Less than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
- 5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are "Less Than Significant With Mitigation Incorporated," describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7. The explanation of each issue should identify:
 - a) The significance criteria or threshold, if any, used to evaluate each question; and
 - b) The mitigation measure identified, if any, to reduce the impact to less than significance

I. AESTHETICS Would the project:				
a) F	lave a substantial adverse effect on a s	cenic	vista?	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discuss	sion/Explanation:			
Scenic natural as a scenic one per	is a view from a particular location or covistas often refer to views of natural land and developed areas, or even entirely cenic vista of a rural town and surrounding son may not be scenic to another, so the vista must consider the perceptions of a	ds, but of deve ng agri ne asse	t may also be compositions of eloped and unnatural areas, such cultural lands. What is scenic to essment of what constitutes a	
individu not adv	The items that can be seen within a vista are visual resources. Adverse impacts to individual visual resources or the addition of structures or developed areas may or may not adversely affect the vista. Determining the level of impact to a scenic vista requires analyzing the changes to the vista as a whole and also to individual visual resources.			
subdivis propose substan adverse	act: The project site is located on Monsion. Based on a site visit by County stated project is not located near or within, obtially change the composition of an existly alter the visual quality or character of will not have an adverse effect on a sce	aff Dia or visib sting so f the v	ne Buell on March 23, 2011 the ble from, a scenic vista and will not cenic vista in a way that would iew. Therefore, the proposed	
The project will not result in cumulative impacts on a scenic vista because the proposed project viewshed and past, present and future projects within that viewshed were evaluated to determine their cumulative effects. Refer to XVIII. Mandatory Findings of Significance for a comprehensive list of the projects considered. Those projects listed in Section XVII are located within the scenic vista's viewshed and will not contribute to a cumulative impact because: the addition of 4 single family residences on lots ranging 2.0 to 2.6 net acres are consistent with surrounding area and will require minimal grading and minimal cut and/or fill slopes. Therefore, the project will not result in adverse project or cumulative impacts on a scenic vista.				
•	Substantially damage scenic resources, outcroppings, and historic buildings with		-	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

State scenic highways refer to those highways that are officially designated by the California Department of Transportation (Caltrans) as scenic (<u>Caltrans - California Scenic Highway Program</u>). Generally, the area defined within a State scenic highway is the land adjacent to and visible from the vehicular right-of-way. The dimension of a scenic highway is usually identified using a motorist's line of vision, but a reasonable boundary is selected when the view extends to the distant horizon. The scenic highway corridor extends to the visual limits of the landscape abutting the scenic highway.

Less than Significant Impact: The proposed project is not visible within the composite viewshed of a State scenic highway, however, it is located in close proximity to a County scenic route, State Route 76 (from Oceanside to east Interstate 15) identified in the Conservation and Open Space Element of the County of San Diego General Plan. The proposed project includes a Tentative Parcel Map to subdivide approximately 10 acres into 4 lots. The project is compatible with the existing visual environment in terms of visual character and quality for the following reasons: residential uses surround the property, the project will require minimal grading and cut/fill slopes within the view of SR-76, and the project would be consistent with the surrounding lots sizes. Thus, the visual impacts would be considered less than significant.

The project will not result in cumulative impacts on a scenic vista because the proposed project viewshed and past, present and future projects within that viewshed were evaluated to determine their cumulative effects. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered. Those projects listed in Section XVII are located within the scenic vista's viewshed and will not contribute to a cumulative impact because: the project will result in minimal grading and minimal cut/fill slopes within the view of SR-76. Therefore, the project will not result in any adverse project or cumulative level effect on a scenic resource within a State scenic highway.

,	Substantially degrade the existing visua surroundings?	l chara	acter or quality of the site and its
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: Visual character is the objective composition of the visible landscape within a viewshed. Visual character is based on the organization of the pattern elements line, form, color, and texture. Visual character is commonly discussed in terms of dominance, scale, diversity and continuity. Visual quality is the viewer's perception of the visual environment and varies based on exposure, sensitivity and expectation of the viewers. The existing visual character and quality of the project site and surrounding can be characterized as residential with some agricultural uses.

The proposed project is a 4-lot residential subdivision. The project is compatible with the existing visual environment's visual character and quality for the following reasons:

the proposed subdivision is consistent with the scale and density of the surrounding existing residential uses and will not degrade the overall visual quality of the neighborhood.

The project will not result in cumulative impacts on visual character or quality because the entire existing viewshed and a list of past, present and future projects within that viewshed were evaluated. Refer to XVIII. Mandatory Findings of Significance for a comprehensive list of the projects considered. Those projects listed in Section XVII are located within the viewshed surrounding the project and will not contribute to a cumulative impact for the following reasons: the project consists of a 4 lot residential subdivision and the property is surrounded by residential properties with similar sized parcels and density. In addition, there will be little grading on the property. Therefore, the project will not result in any adverse project or cumulative level effect on visual character or quality on-site or in the surrounding area.

,	Create a new source of substantial light day or nighttime views in the area?	or gla	re, which would adversely affect
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact:

The applicant proposes a 4 lot residential subdivision, which may include outdoor lighting. The property is not located within a Zone A or Zone B lighting district. Any future outdoor lighting pursuant to this project shall be required to meet the requirements of the County of San Diego Zoning Ordinance (Section 6322-6326) and the Light Pollution Code (Section 59.101-59.115).

The project will not contribute to significant cumulative impacts on day or nighttime views because the project will conform to the Light Pollution Code. The Code was developed by the San Diego County Department of Planning and Land Use and Department of Public Works in cooperation with lighting engineers, astronomers, land use planners from San Diego Gas and Electric, Palomar and Mount Laguna observatories, and local community planning and sponsor groups to effectively address and minimize the impact of new sources light pollution on nighttime views. The standards in the Code are the result of this collaborative effort and establish an acceptable level for new lighting. Compliance with the Code is required prior to issuance of any building permit for any project. Mandatory compliance for all new building permits ensures that this project in combination with all past, present and future projects will not contribute to a cumulatively considerable impact. Therefore, compliance with the Code ensures that the project will not create a significant new source of substantial light or glare, which would adversely affect daytime or nighttime views in the area, on a project or cumulative level.

II. AGRICULTURE AND FORESTRY RESOURCES -- Would the project:

Convert Prime Farmiand, Unique Farmi Importance (Important Farmland), as sh the Farmland Mapping and Monitoring F Agency, or other agricultural resources,	own o Progra	n the maps prepared pursuant to m of the California Resources
Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The project site currently contains an avocado grove. Due to the presence of on-site agricultural resources, the County agricultural resources specialist, Dennis Campbell, evaluated the site to determine the importance of the resource based on the County's Local Agricultural Resources Assessment (LARA) model, which takes into account local factors that define the importance of San Diego County agricultural resources.

The LARA model considers the availability of water resources, climate, soil quality, surrounding land use, topography, and land use or parcel size consistency between the project site and surrounding land uses. A more detailed discussion of the LARA model can be found in the Guidelines for Determining Significance for Agricultural Resources at http://www.sdcdplu.org/dplu/Resource/docs/3~pdf/AG-Guidelines.pdf. In order for a site to be considered an important agricultural resource based on the LARA model, all three required LARA model factors (water, soil, and climate) must receive either a high or moderate score. A low score in any of these three categories would render a LARA model result that the site is not an important agricultural resource.

Based on the result of the LARA Model prepared by staff, the site received a <u>low rating for soil quality</u> because it does not contain soil types that meet the quality criteria for the State Farmland Mapping and Monitoring Program (FMMP) Prime Farmland or Farmland of Statewide Importance categories, hence, the project site receives a low rating for soil quality and the site is not considered an important agricultural resource.

In addition, the project site contains an existing avocado grove and the proposed subdivision would produce 4 parcels, with lot size ranges from 2.0 – 2.6 acres (net), which is sufficient to support agricultural use. In San Diego County, economically productive agriculture is conducted on small farms, with 63 percent of the farms ranging from 1 to 9 acres in size, 77% of the farmers living on their farms, and 92% of farms being family owned (County of San Diego Guidelines for Determining Significance and Report Format and Content Requirements for Agricultural Resources, page 3). Based on these statistics and the proposed parcel sizes, the subject property once subdivided, would remain available for new property owners to cultivate. Furthermore, the viability of farming on residential parcels is further supported by the fact that in San Diego

County there are no exclusive agricultural zones. Therefore, the proposed project would not covert the existing agricultural resources to a non-agricultural use.

Based on the fact that the project site does not contain Prime Farmland, Unique Farmland, or Farmland of Statewide or Local Importance; and the proposed subdivision would not affect the viability of continuous or future farming once the subject property is subdivided. Therefore, no potentially significant project or cumulative level conversion of agricultural resources to a non-agricultural use will occur as a result of this project.

b)	Conflict with existing zoning for agricultu	ıral us	e, or a Williamson Act contract?
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	sion/Explanation:		
which i to resu permitt agricul Contra a Willia	han Significant Impact: The project site is considered to be an agricultural zone. It in a conflict in zoning for agricultural used use in A-70 zones and will not create tural use. Additionally, the project site's ct. Therefore, there will be no conflict warmson Act contract.	Howe se, be a cor land is ith exis	ever, the proposed project will not cause residential use is also a afflict with existing zoning for s not under a Williamson Act sting zoning for agricultural use, or
Puk Res	offlict with existing zoning for, or cause replic Resources Code section 12220(g)), sources Code section 4526), or timberlatined by Government Code section 5110	or timb nd zon	perland (as defined by Public
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	sion/Explanation:		

No Impact: The project site including off-site improvements do not contain forest lands or timberland. The County of San Diego does not have any existing Timberland Production Zones. In addition, the project is consistent with existing zoning and a rezone of the property is not proposed. Therefore, project implementation would not conflict with existing zoning for, or cause rezoning of, forest land, timberland or timberland production zones.

d) Result in the loss of forest land, conversion of forest land to non-forest use, or involve other changes in the existing environment, which, due to their location or nature, could result in conversion of forest land to non-forest use?

- 10 -

Discussion/Explanation:

Incorporated

Less than Significant Impact: The project site and surrounding area within a three mile radius contain active agricultural operations, and lands designated as Important Farmland. As a result, the proposed project was reviewed by Dennis Campbell and was determined not to have significant adverse impacts related to the conversion of Prime Farmland, Unique Farmland, Farmland of Statewide or Local Importance or active agricultural operations to a non-agricultural use for the following reasons: the project, which proposes the creation of four residential parcels ranges from 2-2.6acres (net), is compatible with the existing land use because it introduces a land use (residential) that currently exist in the surrounding area. The addition of four residences would not significantly change the existing land uses or density in the area. Also, agriculture will remain viable on the proposed parcels and would not result in a change that could convert agricultural operations to a non-agricultural use. Surrounding active agricultural operations consist of avocado groves which commonly operate among residential uses and create minimal land use conflicts. Also, there is a Williamson Contract land located to the west of the project site but the project would not result in any impact to the Williamson Contract land because it is separated from the project site by an existing road (Monserate Hill Road).

Therefore, no potentially significant project or cumulative level conversion of Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or Farmland of Local Importance to a non-agricultural use will occur as a result of this project.

III. AIR QUALITY -- Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a)	Conflict with or obstruct implementation Strategy (RAQS) or applicable portions		,
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	ssion/Explanation:		
in SAN of the of the expec emiss	than Significant Impact: The project pro NDAG growth projections used in develop project will result in emissions of ozone p RAQS based on growth projections. As ted to conflict with either the RAQS or the ions from the project are below the screet exambient air quality standards.	oment orecurs such, e SIP.	of the RAQS and SIP. Operation sors that were considered as a part the proposed project is not In addition, the operational
b)	Violate any air quality standard or contriprojected air quality violation?	bute s	ubstantially to an existing or
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

In general, air quality impacts from land use projects are the result of emissions from motor vehicles, and from short-term construction activities associated with such projects. The San Diego County Land Use Environment Group (LUEG) has established guidelines for determining significance which incorporate the Air Pollution Control District's (SDAPCD) established screening-level criteria for all new source review (NSR) in APCD Rule 20.2. These screening-level criteria can be used as numeric methods to demonstrate that a project's total emissions (e.g. stationary and fugitive emissions, as well as emissions from mobile sources) would not result in a significant impact to air quality. Since APCD does not have screening-level criteria for emissions of volatile organic compounds (VOCs), the use of the screening level for reactive organic compounds (ROC) from the South Coast Air Quality Management District (SCAQMD) for the Coachella Valley (which are more appropriate for the San Diego Air Basin) are used.

Less than Significant Impact: The applicant proposes the creation of 4 residential lots which result in 4 single family dwellings and the grading associated with those dwellings. However, grading operations associated with the construction of the project would be subject to County of San Diego Grading Ordinance, which requires the implementation of dust control measures. Emissions from the construction phase would be minimal, temporary and localized, resulting in pollutant emissions below the screening-level criteria established by the LUEG guidelines for determining significance.

In addition, the vehicle trips generated from the project will result in 48 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are below the screening-level criteria established by the guidelines for criteria pollutants. As such, the project will not violate any air quality standard or contribute substantially to an existing or projected air quality violation.

,	which the project region is non-attainme ambient air quality standard (including re quantitative thresholds for ozone precur	ent und eleasi	der an applicable federal or state ng emissions which exceed
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

San Diego County is presently in non-attainment for the 1-hour concentrations under the California Ambient Air Quality Standard (CAAQS) for Ozone (O₃). San Diego County is also presently in non-attainment for the annual geometric mean and for the 24-hour concentrations of Particulate Matter less than or equal to 10 microns (PM₁₀) under the CAAQS. O₃ is formed when volatile organic compounds (VOCs) and nitrogen oxides (NO_x) react in the presence of sunlight. VOC sources include any source that burns fuels (e.g., gasoline, natural gas, wood, oil); solvents; petroleum processing and storage; and pesticides. Sources of PM₁₀ in both urban and rural areas include: motor vehicles, wood burning stoves and fireplaces, dust from construction, landfills, agriculture, wildfires, brush/waste burning, and industrial sources of windblown dust from open lands.

Less than Significant Impact: Air quality emissions associated with the project include emissions of PM_{10} , NO_x and VOCs from construction/grading activities, and also as the result of increase of traffic from project implementation. However, grading operations associated with the construction of the project would be subject to County of San Diego Grading Ordinance, which requires the implementation of dust control measures. Emissions from the construction phase would be minimal, localized and temporary resulting in PM_{10} and VOC emissions below the screening-level criteria established by the LUEG guidelines for determining significance. The vehicle trips generated from the project will result in 48 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are below the screening-level criteria established by the LUEG guidelines for determining significance.

In addition, a list of past, present and future projects within the surrounding area were evaluated and none of these projects emit significant amounts of criteria pollutants. Refer to XVIII. Mandatory Findings of Significance for a comprehensive list of the projects considered. The proposed project as well as the past, present and future

projects within the surrounding area, have emissions below the screening-level criteria established by the LUEG guidelines for determining significance, therefore, the construction and operational emissions associated with the proposed project are not expected to create a cumulatively considerable impact nor a considerable net increase of PM10, or any O_3 precursors.

d) Expose sensitive receptors to substantial pollutant concentrations?			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discu	ssion/Explanation:		
Grade house in air	rality regulators typically define sensitive (e), hospitals, resident care facilities, or date individuals with health conditions that we quality. The County of San Diego also contors since they house children and the ele	y-care ould be onside	e centers, or other facilities that may e adversely impacted by changes
recep consu Buell deterr any id propo signifi mono consid becau	than Significant Impact: The project we tors" into the project area: 4 additional dwaltation with DPLU staff air quality special on March 23, 2011, the project is not local mined by the SCAQMD in which the dilutionarised point source of significant emissions are uses or activities that would result in example a cant pollutant concentrations and will not axide hotspots. In addition, the project will derable exposure of sensitive receptors to use proposed project as well as the listed ming-level criteria established by the LUE	velling ist and ated with on of place place I not consider the project	units. However, based on a site visit conducted by Diane ithin a quarter-mile (the radius collutants is typically significant) of similarly, the project does not are of these sensitive receptors to sensitive receptors near carbon contribute to a cumulatively tantial pollutant concentrations ets have emissions below the
e)	Create objectionable odors affecting a s	substar	ntial number of people?
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The project could produce objectionable odors, which would result from volatile organic compounds, ammonia, carbon dioxide, hydrogen sulfide, methane, alcohols, aldehydes, amines, carbonyls, esters, disulfides dust and endotoxins from the construction and operational phases. However, these substances, if present at all, would only be in trace amounts (less that 1 μ g/m³). Subsequently, no significant air quality – odor impacts are expected to affect surrounding receptors.

Moreover, the affects of objectionable odors are localized to the immediate surrounding area and will not contribute to a cumulatively considerable odor.

<u>IV. BI</u> a)	OLOGICAL RESOURCES Would the Have a substantial adverse effect, either on any species identified as a candidate local or regional plans, policies, or regularish and Game or U.S. Fish and Wildlife	direc , sens ations	tly or through habitat modifications, sitive, or special status species in , or by the California Department of
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	ssion/Explanation:		
No Impact: Based on an analysis of the County's Geographic Information System (GIS) records, the County's Comprehensive Matrix of Sensitive Species, and site photos, County staff biologist, Beth Ehsan, has determined that no native vegetation communities or habitats exist on or adjacent to the site because it has been completely disturbed. Therefore, the project will not have a substantial adverse effect on any candidate, sensitive, or special status species and would not contribute to cumulative impacts to these designated species.			
b)	Have a substantial adverse effect on any natural community identified in local or r the California Department of Fish and G	egiona	al plans, policies, regulations or by

Discus	ssion/Explanation:			
No Impact: Based on an analysis of the County's Geographic Information System (GIS) records, the County's Comprehensive Matrix of Sensitive Species, and site photos, County staff biologist, Beth Ehsan, has determined that the site has been completely disturbed and contains no native vegetation or habitats. Therefore, the project would not interfere with the movement of any native resident or migratory fish or wildlife species, or established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.				
e)	Conflict with the provisions of any adopt Communities Conservation Plan, other a conservation plan or any other local poli- resources?	approv	ed local, regional or state habitat	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

No Impact: Refer to the attached Ordinance Compliance Checklist for further information on consistency with any adopted Habitat Conservation Plan, Natural Communities Conservation Plan, other approved local, regional or state habitat conservation plan, including, Habitat Management Plans (HMP), Special Area Management Plans (SAMP), or any other local policies or ordinances that protect biological resources including the Multiple Species Conservation Program (MSCP), Biological Mitigation Ordinance, Resource Protection Ordinance (RPO), Habitat Loss Permit (HLP).

V. CULTURAL RESOURCES -- Would the project:

a)	Cause a substantial adverse change in as defined in 15064.5?	the sig	Inificance of a historical resource
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discu	ssion/Explanation:		
San E been occur resou 4-Lot	npact: Based on an analysis of records a Diego staff archaeologists Gail Wright and determined that there are no impacts to havithin the project site. The results of the rees report titled, "Cultural Resources Suspendivision, 3200 21075 (TPM) in Fallbrott, dated March 30, 2011.	Diane istoric survervey F	e Buell on March 23, 2011, it has cal resources because they do not ey are provided in a cultural Report for Dimitri, Diffendale & Kirk
b)	Cause a substantial adverse change in resource pursuant to 15064.5?	the sig	nificance of an archaeological
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

No Impact: Based on an analysis of records and a survey of the property by County of San Diego staff archaeologists, Gail Wright and Diane Buell on March 23, 2011, it has been determined that the project site does not contain any archaeological resources. The results of the survey are provided in a cultural resources report titled, "Cultural Resources Survey Report for Dimitri, Diffendale & Kirk 4-Lot Subdivision, 3200 21075 (TPM) in Fallbrook, Negative Findings", prepared by Gail Wright, dated March 30, 2011. Staff conducted a records search of the surrounding area using the California Historic Resources Inventory System (CHRIS). Twenty-eight studies have been conducted

within a one mile radius (including one survey that included the subject parcel (Case 02-025) and 18 sites were identified.

Native American Consultation: No Sacred Lands were identified by the Native American Heritage Commission (NAHC). Staff contacted the Native American groups and individuals provided by the NAHC to further investigate whether they have knowledge of Sacred Lands occurring on the subject parcels. No response was received. Cami Mojado of the San Luis Rey Band of Mission Indians also participated in the field survey on March 23, 2011.

Based on the field survey and the steep terrain grading monitoring will not be required as s condition of approval. However, the project must comply with the San Diego County Grading, Clearing, and Watercourse Ordinance (§87.101-87.804), CEQA §15064.5(d), and §7050.5 of the Health & Safety Code. Section 87.429 of the Grading, Clearance, and Watercourse Ordinance requires the suspension of grading operations when human remains or Native American artifacts are encountered.

c) Directly or indirectly destroy a unique geologic feature?					
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		
Discussi	ion/Explanation:				
San Diego County has a variety of geologic environments and geologic processes which generally occur in other parts of the state, country, and the world. However, some features stand out as being unique in one way or another within the boundaries of the County.					
No Impact: The site does not contain any unique geologic features that have been listed in the County's Guidelines for Determining Significance for Unique Geology Resources nor does the site support any known geologic characteristics that have the potential to support unique geologic features.					
d) D	irectly or indirectly destroy a unique pa	leonto	logical resource or site?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		
Discussi	ion/Explanation:				

No Impact: A review of the County's Paleontological Resources Maps indicates that the project is located entirely on plutonic igneous rock and has no potential for producing fossil remains.

e)	Disturb any human remains, including th cemeteries?	ose ir	nterred outside of formal

identified This indi- underlain there will adverse In addition spreadin	an Significant: The project site is in the County Guidelines for Detected that the liquefaction potential by poor artificial fill or located with be a less than significant impact effects from a known area suscepton, since liquefaction potential at the g is not considered to be a seismin significant.	erminion at the strong	ng Signer site of the site of	gnificance for Geologic Hazards. e is low. In addition, the site is not plain. Therefore, there will be sposure of people or structures to und failure, including liquefaction. w, earthquake-induced lateral
iv	. Landslides?			
	Potentially Significant Impact Less Than Significant With Mitigat Incorporated	_		Less than Significant Impact No Impact
Discussi	on/Explanation:			

Less than Significant Impact: The site is located within a "Landslide Susceptibility Area" as identified in the County Guidelines for Determining Significance for Geologic Hazards. Landslide Susceptibility Areas were developed based on landslide risk profiles included in the *Multi-Jurisdictional Hazard Mitigation Plan, San Diego, CA* (URS, 2004). Landslide risk areas from this plan were based on data including steep slopes (greater than 25%); soil series data (SANDAG based on USGS 1970s series); soil-slip susceptibility from USGS; and Landslide Hazard Zone Maps (limited to western portion

of the County) developed by the California Department of Conservation, Division of Mines and Geology (DMG). Also included within Landslide Susceptibility Areas are gabbroic soils on slopes steeper than 15% in grade because these soils are slide prone. According to the Geologic Map of the Bonsall 7.5' Quadrangle (2000), the site is reportedly underlain by Cretaceous age granodiorite (bedrock) with no landslide deposits mapped on or near the site. Based on the geologic environment of the site, the site has a low potential for landslides. Therefore, there will be no potentially significant impact from the exposure of people or structures to adverse effects from landslides

o)	Result in substantial soil erosion or the	loss of	f topsoil?	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

Less than Significant Impact: According to the Soil Survey of San Diego County, the soils on-site are identified as Cieneba coarse sandy loam and Cieneba very rocky coarse sandy loam that has a soil erodibility rating of "moderate" as indicated by the Soil Survey for the San Diego Area, prepared by the US Department of Agriculture, Soil Conservation and Forest Service dated December 1973. However, the project will not result in substantial soil erosion or the loss of topsoil for the following reasons:

- The project will not result in unprotected erodible soils; will not alter existing drainage patterns; is not located in a floodplain, wetland, or significant drainage feature; and will not develop steep slopes.
- The project has prepared a Storm water Management Plan dated November 14, 2011, prepared by Gary Lipska of Aquaterra Engineering, Inc.. The plan includes the following Best Management Practices to ensure sediment does not erode from the project site: silt fencing and gravel bag berms.
- The project involves grading. However, the project is required to comply with the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING). Compliance with these regulations minimizes the potential for water and wind erosion.

Due to these factors, it has been found that the project will not result in substantial soil erosion or the loss of topsoil on a project level.

In addition, the project will not contribute to a cumulatively considerable impact because all the of past, present and future projects included on the list of projects that involve grading or land disturbance are required to follow the requirements of the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING); Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB

on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); and County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). Refer to XVIII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

c)	Be located on a geologic unit or soil that unstable as a result of the project, and plandslide, lateral spreading, subsidence	otenti	ally result in an on- or off-site		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		
Discu	ssion/Explanation:				
Less than Significant Impact: The proposed project involves grading that would result in the creation of areas of cut and areas underlain by fill. In order to assure that any proposed buildings (including those proposed on the project site) are adequately supported (whether on native soils, cut or fill), a Soils Engineering Report is required as part of the Building Permit process. This Report would evaluate the strength of underlying soils and make recommendations on the design of building foundation systems. The Soils Engineering Report must demonstrate that a proposed building meets the structural stability standards required by the California Building Code. The report must be approved by the County prior to the issuance of a Building Permit. With this standard requirement, impacts would be less than significant. For further information regarding landslides, liquefaction, and lateral spreading, refer to VI Geology and Soils, Question a., iii-iv listed above.					
d)	Be located on expansive soil, as defined Code (1994), creating substantial risks t		•		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		

Discussion/Explanation:

Less than Significant Impact: The project is not located on expansive soils as defined within Table 18-I-B of the Uniform Building Code (1994). This was confirmed by staff review of the Soil Survey for the San Diego Area, prepared by the US Department of Agriculture, Soil Conservation and Forest Service dated December 1973. The soils onsite include Cieneba coarse sandy loam, 15 to 30 percent slopes, eroded and Cieneba very rocky coarse sandy loam, 30 to 75 percent slopes. The project will not have any significant impacts because the project is required to comply with the improvement requirements identified in the 1997 Uniform Building Code, Division III – Design Standard for Design of Slab-On-Ground Foundations to Resist the Effects of Expansive

Soils and Compressible Soils, which ensure suitable structure safety in areas with expansive soils. Therefore, these soils will not create substantial risks to life or property.

VII. C	REENHOUSE GAS EMISSIONS - Wou	ld the	project
a)	Generate greenhouse gas emissions, e significant impact on the environment?	ither o	directly or indirectly, that may have a
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: Greenhouse Gas (GHG) Emissions are said to result in an increase in the earth's average surface temperature commonly referred to as global warming. This rise in global temperature is associated with long-term changes in

precipitation, temperature, wind patterns, and other elements of the earth's climate system, known as climate change. These changes are now broadly attributed to GHG emissions, particularly those emissions that result from the human production and use of fossil fuels.

GHGs include carbon dioxide, methane, halocarbons (HFCs), and nitrous oxide, among others. Human induced GHG emissions are a result of energy production and consumption, and personal vehicle use, among other sources. A regional GHG inventory prepared for the San Diego Region¹ identified on-road transportation (cars and trucks) as the largest contributor of GHG emissions in the region, accounting for 46% of the total regional emissions. Electricity and natural gas combustion were the second (25%) and third (9%) largest regional contributors, respectively, to regional GHG emissions.

Climate changes resulting from GHG emissions could produce an array of adverse environmental impacts including water supply shortages, severe drought, increased flooding, sea level rise, air pollution from increased formation of ground level ozone and particulate matter, ecosystem changes, increased wildfire risk, agricultural impacts, ocean and terrestrial species impacts, among other adverse effects.

In 2006, the State passed the Global Warming Solutions Act of 2006, commonly referred to as AB 32, which set the greenhouse gas emissions reduction goal for the State of California into law. The law requires that by 2020, State emissions must be reduced to 1990 levels by reducing greenhouse gas emissions from significant sources via regulation, market mechanisms, and other actions.

According to the San Diego County Greenhouse Gas Inventory (2008), the region must reduce its GHG emissions by 33 percent from "business-as-usual" emissions to achieve 1990 emissions levels by the year 2020. "Business-as-usual" refers to the 2020 emissions that would have occurred in the absence of the mandated reductions.

Senate Bill 375 (SB 375), passed in 2008, links transportation and land use planning with global warming. It requires the California Air Resources Board (ARB) to set regional targets for the purpose of reducing greenhouse gas emissions from passenger vehicles. Under this law, if regions develop integrated land use, housing and transportation plans that meet SB 375 targets, new projects in these regions can be relieved of certain review requirements under CEQA. Development of regional targets is underway and SANDAG is in the process of preparing the region's Sustainable Communities Strategy (SCS) which will be a new element of the 2050 Regional Transportation Plan (RTP). The strategy will identify how regional greenhouse gas reduction targets, as established by the ARB, will be achieved through development patterns, transportation infrastructure investments, and/or transportation measures or policies that are determined to be feasible.

¹ San Diego County Greenhouse Gas Inventory: An Analysis of Regional Emissions and Strategies to Achieve AB 32 Targets. University of San Diego and the Energy Policy Initiatives Center (EPIC), September 2008.

In addressing the potential for a project to generate GHG emissions that would have a potentially significant cumulative effect on the environment, a 900 metric ton threshold was selected to identify those projects that would be required to calculate emissions and implement mitigation measures to reduce a potentially significant impact. The 900 metric ton screening threshold is based on a threshold included in the CAPCOA white paper² that covers methods for addressing greenhouse gas emissions under CEQA. The CAPCOA white paper references the 900 metric ton guideline as a conservative threshold for requiring further analysis and mitigation. The 900 metric ton threshold was based on a review of data from four diverse cities (Los Angeles in southern California and Pleasanton, Dublin, and Livermore in northern California) to identify the threshold that would capture at least 90% of the residential units or office space on the pending applications list. This threshold will require a substantial portion of future development to minimize GHG emissions to ensure implementation of AB 32 targets is not impeded. By ensuring that projects that generate more than 900 metric tons of GHG implement mitigation measures to reduce emissions, it is expected that a majority of future development will contribute to emission reduction goals that will assist the region in meeting its GHG reduction targets.

It should be noted that an individual project's GHG emissions will generally not result in direct impacts under CEQA, as the climate change issue is global in nature, however an individual project could be found to contribute to a potentially significant cumulative impact. CEQA Guidelines Section 15130(f) states that an EIR shall analyze greenhouse gas emissions resulting from a proposed project when the incremental contribution of those emissions may be cumulatively considerable.

The project is a four lot minor residential subdivision and is expected to generate less than 900 metric tons of GHG emissions based on estimates of GHG emissions for various project types included in the CAPCOA white paper³. Emissions from the project will be generated from vehicle trips, water consumption, waste generation and disposal, and residential fuel combustion. The project's GHG emissions are found to have a less than cumulatively considerable contribution to GHG emissions because the project will generate less than 900 metric tons of GHGs.

Furthermore, projects that generate less than 900 metric tons of GHG, will also participate in emission reductions because air emissions including GHGs are under the purview of CARB (or other regulatory agencies) and will be "regulated" either by CARB, the Federal Government, or other entities. For example, new vehicles will be subject to increased fuel economy standards and emission reductions⁴, large and small

² See CAPCOA White Paper: "CEQA &Climate Change: Evaluating and Addressing Greenhouse Gas Emissions from Projects Subject to the California Environmental Quality Act "January 2008 (http://www.capcoa.org/rokdownloads/CEQA/CAPCOA%20White%20Paper.pdf).

³ 900 metric tons of GHG emissions are estimated to be generated by 50 Single Family Residential units, 70 apartments/condos, 35,000 sf of general commercial/office, 11,000 sf of retail, or 6,300 sf of supermarket/grocery space.

⁴ On September 15, 2009, the United States Environmental Protection Agency (EPA) and the Department of Transportation's National Highway Safety Administration (NHTSA) proposed a national program to

L \

appliances will be subject to more strict emissions standards, and energy delivered to consumers will increasingly come from renewable sources⁵. As a result, even the emissions that result from projects that produce less than 900 metric tons of GHG will be subject to emission reductions. Likewise, the project would also participate in the mandated emissions reductions through energy and resource use that is subject to emission reduction mandates beyond "business-as-usual."

Therefore, it is determined that the project would result in less than cumulatively considerable impacts associated with GHG emissions and no mitigation is required.

,	Conflict with an applicable plan, policy or reducing the emissions of greenhouse of	_	• • • •
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	sion/Explanation:		

Less than Significant Impact: In 2006, the State passed the Global Warming Solutions Act of 2006, commonly referred to as AB 32, which set the greenhouse gas emissions reduction goal for the State of California into law. The law requires that by 2020, State emissions must be reduced to 1990 levels by reducing greenhouse gas emissions from significant sources via regulation, market mechanisms, and other actions.

Senate Bill 375 (SB 375), passed in 2008, links transportation and land use planning with global warming. It requires the California Air Resources Board (ARB) to set regional targets for the purpose of reducing greenhouse gas emissions from passenger vehicles. Under this law, if regions develop integrated land use, housing and transportation plans that meet SB 375 targets, new projects in these regions can be relieved of certain review requirements under CEQA. Development of regional targets is underway and SANDAG is in the process of preparing the region's Sustainable Communities Strategy (SCS) which will be a new element of the 2050 Regional Transportation Plan (RTP). The strategy will identify how regional greenhouse gas reduction targets, as established by the ARB, will be achieved through development

reduce GHG emissions and improve fuel economy for new cars and trucks sold in the United States. The proposed standards would cut CO₂ emissions by an estimated 950 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program.

⁵ California's Renewable Portfolio Standard (RPS) requires electric corporations to increase procurement from eligible renewable energy resources by at least 1% of their retail sales annually, until they reach 20% by 2010. In 2008, the governor signed Executive Order S-14-08 (EO) to streamline California's renewable energy project approval process and increase the state's Renewable Energy Standard to 33% renewable power by 2020. The Air Resources Board is in the process of developing regulations to implement the 33% standard known as the California Renewable Electricity Standard (RES).

patterns, transportation infrastructure investments, and/or transportation measures or policies that are determined to be feasible.

To implement State mandates to address climate change in local land use planning, local land use jurisdictions are generally preparing GHG emission inventories and reduction plans and incorporating climate change policies into local General Plans to ensure development is guided by a land use plan that reduces GHG emissions. The County of San Diego is currently in the process of updating its General Plan and incorporating associated climate change policies. These policies will provide direction for individual development projects to reduce GHG emissions and help the County meet its GHG emission reduction targets.

Until local plans are developed to address greenhouse gas emissions, such as a local Sustainable Communities Strategy and updated General Plan Policies, the project is evaluated to determine whether it would impede the implementation of AB 32 GHG reduction targets. For the reasons discussed in the response to question VII.a), the project would not impede the implementation of AB 32 reduction targets. Therefore, the project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

VIII. HAZARDS AND HAZARDOUS MATERIALS -- Would the project:

,	Create a significant hazard to the public transport, storage, use, or disposal of hazardous materials into the environme	azard dent c	ous materials or wastes or through
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
D:	alam/Eumlamatian		

Discussion/Explanation:

Less than Significant Impact: The applicant proposes a 4-lot residential subdivision. The project will not create a significant hazard to the public or the environment because it does not propose the storage, use, transport, emission, or disposal of Hazardous Substances, nor are Hazardous Substances proposed or currently in use in the immediate vicinity.

Land use on the 10.4 acre property historically consisted of agricultural uses, specifically as avocado groves, since at least 1981. The Limited Phase II Environmental Site Assessment was completed for the subject property to determine the extent, if any, of hazardous materials contamination onsite as a result of the historic agricultural uses. The Phase II assessment included field sampling of surficial soils from eight locations, at depths of six to thirty inches below ground surface (bgs) on the property. The locations of the soil sample borings were chosen to represent the locations of future residences. All samples reported no concentrations above the

b)

Preliminary Remediation Goals established for residential properties by the United States Environmental Protection Agency (EPA). The Phase II findings concluded that historical agricultural activities at the site have not resulted in the presence of pesticide impacted soil to the extent of limiting site development, and that no additional assessment is warranted at this time.

In addition, the applicant does not propose to demolish any structures onsite and therefore would not create a hazard related to the release of asbestos, lead based paint or other hazardous materials from demolition activities.

Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

cuberances, or made mann one quarter nine of an exacting of proposed concern				
Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		
Discussion/Explanation:				
No Impact: The project is not located within or school. Therefore, the project will not have an school.	•	• • • • • • • • • • • • • • • • • • • •		
c) Be located on a site which is included of compiled pursuant to Government Code to have been subject to a release of has would it create a significant hazard to the	e Secti zardou	ion 65962.5, or is otherwise known us substances and, as a result,		
Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		
Discussion/Europeation				

Discussion/Explanation:

Less than Significant Impact: Based on a regulatory database search, the project site has not been subject to a release of hazardous substances that would create a significant hazard to the public or environment. The project site is not included in any of the following lists or databases: the State of California Hazardous Waste and Substances sites list compiled pursuant to Government Code Section 65962.5., the San Diego County Hazardous Materials Establishment database, the San Diego County DEH Site Assessment and Mitigation (SAM) Case Listing, the Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfield's Reuse Program Database ("CalSites" Envirostor Database), the Resource Conservation and Recovery Information System (RCRIS) listing, the EPA's Superfund CERCLIS database or the EPA's National Priorities List (NPL). Additionally, the applicant does not propose structures for human occupancy or significant linear excavation within 1,000 feet of an open, abandoned, or closed landfill, is not located on or within 250 feet of the boundary of a parcel identified

as containing burn ash (from the historic burning of trash), is not on or within 1,000 feet of a Formerly Used Defense Site (FUDS), does not contain a leaking Underground Storage Tank (UST) and is not located on a site with the potential for contamination from historic uses such as industrial uses, a gas station or vehicle repair shop.

The project site contained the potential for contamination from historic agriculture. Land use on the 10.4 acre property consisted of agricultural uses, specifically as an avocado grove, since at least 1981. The Limited Phase II Environmental Site Assessment was completed for the subject property to determine the extent, if any, of hazardous materials contamination onsite as a result of the historic agricultural uses. The Phase II assessment included field sampling of surficial soils from eight locations, at depths of six to thirty inches below ground surface (bgs) on the property. The locations of the soil sample borings were chosen to represent the locations of future residences. All samples reported no concentrations above the Preliminary Remediation Goals established for residential properties by the United States Environmental Protection Agency (EPA). The Phase II findings concluded that historical agricultural activities at the site have not resulted in the presence of pesticide impacted soil to the extent of limiting site development, and that no additional assessment is warranted at this time.

Therefore, since the property shows no evidence of contamination from historic uses, the project will not result in any potentially significant impacts related to the release of hazardous substances onsite.

d)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		
Discus	ssion/Explanation:				
No Impact: The proposed project is not located within an Airport Land Use Compatibility Plan (ALUCP), an Airport Influence Area, or a Federal Aviation Administration Height Notification Surface. Also, the applicant does not propose construction of any structure equal to or greater than 150 feet in height, constituting a safety hazard to aircraft and/or operations from an airport or heliport. Therefore, the project will not constitute a safety hazard for people residing or working in the project area.					
e)	e) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?				
	Potentially Significant Impact Less Than Significant With Mitigation		Less than Significant Impact No Impact		

Incorporated

Discussion/Explanation:

No Impact: The proposed project is not within one mile of a private airstrip. As a result, the project will not constitute a safety hazard for people residing or working in the project area.

,	Impair implementation of or physically in response plan or emergency evacuation	, , ,
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

The following sections summarize the project's consistency with applicable emergency response plans or emergency evacuation plans.

 i. OPERATIONAL AREA EMERGENCY PLAN AND MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN:

Less than Significant Impact: The Operational Area Emergency Plan is a comprehensive emergency plan that defines responsibilities, establishes an emergency organization, defines lines of communications, and is designed to be part of the statewide Standardized Emergency Management System. The Operational Area Emergency Plan provides guidance for emergency planning and requires subsequent plans to be established by each jurisdiction that has responsibilities in a disaster situation. The Multi-Jurisdictional Hazard Mitigation Plan includes an overview of the risk assessment process, identifies hazards present in the jurisdiction, hazard profiles, and vulnerability assessments. The plan also identifies goals, objectives and actions for each jurisdiction in the County of San Diego, including all cities and the County unincorporated areas. The project will not interfere with this plan because it will not prohibit subsequent plans from being established or prevent the goals and objectives of existing plans from being carried out.

ii. SAN DIEGO COUNTY NUCLEAR POWER STATION EMERGENCY RESPONSE PLAN

No Impact: The San Diego County Nuclear Power Station Emergency Response Plan will not be interfered with by the project due to the location of the project, plant and the specific requirements of the plan. The emergency plan for the San Onofre Nuclear Generating Station includes an emergency planning zone within a 10-mile radius. All land area within 10 miles of the plant is not within the jurisdiction of the unincorporated County and as such a project in the unincorporated area is not expected to interfere with any response or evacuation.

iii. OIL SPILL CONTINGENCY ELEMENT

No Impact: The Oil Spill Contingency Element will not be interfered with because the project is not located along the coastal zone or coastline.

Less Than Significant Impact:

iv. EMERGENCY WATER CONTINGENCIES ANNEX AND ENERGY SHORTAGE RESPONSE PLAN

No Impact: The Emergency Water Contingencies Annex and Energy Shortage Response Plan will not be interfered with because the applicant does not propose altering major water or energy supply infrastructure, such as the California Aqueduct.

v. DAM EVACUATION PLAN

No Impact: The Dam Evacuation Plan will not be interfered with because the project is not located within a dam inundation zone.

g)	Expose people or structures to a sign wildland fires, including where wildlan where residences are intermixed with	ds are a	adjacent to urbanized areas or
	Potentially Significant Impact Less Than Significant With Mitigatio Incorporated	on \square	Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The proposed project is adjacent to wildlands that have the potential to support wildland fires. However, the project will not expose people or structures to a significant risk of loss, injury or death involving wildland fires because the project will comply with the regulations relating to emergency access, water supply, and defensible space specified in the Consolidated Fire Code for the 16 Fire Protection Districts in San Diego County. Implementation of these fire safety standards will occur during the Tentative Parcel Map and building permit process. Also, a Fire Service Availability Letter dated September 11, 2006 and conditions letter sent on April 23, 2010, have been received from the North County Fire Protection District. The conditions from the North County Fire Protection District include: 100' fuel reduction around all proposed structures, 30' fuel reduction on both sides of any road or driveway (40 along SR-76), three fire hydrants shall be installed that are capable of delivering 1,500 GPM with a 20 psi residual, creation of a CC&R to ensure the Fire Protection Plan is carried out, provide a road sign indicating that residents should flee the area at any sign of a fire threat since the property exceeds the dead end road length, removal of non-native species like fan palms on the proposed property, and road improvements up to the property site. The Fire Service Availability Letter indicates the expected

h)

emergency travel time to the project site to be 7.11 minutes. The Maximum Travel Time allowed pursuant to the County Safety Element is 10 minutes. Therefore, based on the review of the project by County staff, through compliance with the Consolidated Fire Code and through compliance with the San Diego Rural Fire Protection District's conditions, the project is not anticipated to expose people or structures to a significant risk of loss, injury or death involving hazardous wildland fires. Moreover, the project will not contribute to a cumulatively considerable impact, because all past, present and future projects in the surrounding area are required to comply with the Consolidated Fire Code.

Propose a use, or place residents adjacent to an existing or reasonably

,	foreseeable use that would substantially exposure to vectors, including mosquito transmitting significant public health disc	es, ra	ts or flies, which are capable of
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discu	ssion/Explanation:		
No Impact: The project does not involve or support uses that allow water to stand for a period of 72 hours (3 days) or more (e.g. artificial lakes, agricultural irrigation ponds). Also, the project does not involve or support uses that will produce or collect animal waste, such as equestrian facilities, agricultural operations (chicken coops, dairies etc.), solid waste facility or other similar uses. Moreover, based on a site visit conducted by Diane Buell on March 23, 2011 there are none of these uses on adjacent properties. Therefore, the project will not substantially increase current or future resident's exposure to vectors, including mosquitoes, rats or flies.			
<mark>IX. H</mark> a)	YDROLOGY AND WATER QUALITY Violate any waste discharge requiremen		I the project:
_, 	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The applicant proposes a 4-lot residential subdivision which requires an NPDES General Permit for Discharges of Storm Water Associated with Construction Activities. The project applicant has provided a copy of a Stormwater Management Plan which demonstrates that the project will comply with all requirements of an NPDES General Permit. The applicant will be required to implement the following site design measures and/or source control BMPs and/or treatment control BMPs to reduce potential pollutants to the maximum extent practicable from entering storm water runoff: silt fencing, gravel bag berm, street sweeping and vacuuming, stabilized

construction entrance and exit, and plastic tarping during a rain event. These measures will enable the project to meet waste discharge requirements as required by the Land-Use Planning for New Development and Redevelopment Component of the San Diego Municipal Permit (SDRWQCB Order No. R9-2007-0001), as implemented by the San Diego County Jurisdictional Urban Runoff Management Program (JURMP) and Standard Urban Storm Water Mitigation Plan (SUSMP).

D)	Water Act Section 303(d) list? If so, coupollutant for which the water body is alre	uld the	e project result in an increase in any
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The project lies in the San Luis Rey River hydrologic subarea, within the Lower San Luis 903.1 hydrologic unit. According to the Clean Water Act Section 303(d) list, June 2007, although the mouth of the San Luis Rey is impaired for coliform bacteria, no portion of the San Luis Rey River, which is tributary to the Pacific Ocean, is impaired. Constituents of concern in the San Luis Rey River watershed include coliform bacteria, nitrate, sediment, and pesticides.

The project proposes the following activities that are associated with these pollutants: construction activities associated with a single family residence. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed such that potential pollutants will be reduced in any runoff to the maximum extent practicable so as not to increase the level of these pollutants in receiving waters: silt fence, tarping during a rain event, street sweeping and vacuuming, stabilized construction entrance/exit, and gravel bag berms.

The proposed BMPs are consistent with regional surface water and storm water planning and permitting process that has been established to improve the overall water quality in County watersheds. As a result the project will not contribute to a cumulative impact to an already impaired water body, as listed on the Clean Water Act Section 303(d). Regional surface water and storm water permitting regulation for County of San Diego, Incorporated Cities of San Diego County, and San Diego Unified Port District includes the following: Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). The stated purposes of these ordinances are to protect the health, safety and general welfare of the County of San Diego residents; to protect water resources and to improve water quality; to cause the use of management practices by the County and its citizens that will reduce the adverse effects of polluted runoff discharges on waters of the state; to secure benefits from the use of storm water

as a resource; and to ensure the County is compliant with applicable state and federal laws. Ordinance No. 9424 (WPO) has discharge prohibitions, and requirements that vary depending on type of land use activity and location in the County. Ordinance No. 9426 is Appendix A of Ordinance No. 9424 (WPO) and sets out in more detail, by project category, what Dischargers must do to comply with the Ordinance and to receive permits for projects and activities that are subject to the Ordinance. Collectively, these regulations establish standards for projects to follow which intend to improve water quality from headwaters to the deltas of each watershed in the County. Each project subject to WPO is required to prepare a Storm water Management Plan that details a project's pollutant discharge contribution to a given watershed and propose BMPs or design measures to mitigate any impacts that may occur in the watershed.

c)	Could the proposed project cause or co surface or groundwater receiving water beneficial uses?	• • •
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The Regional Water Quality Control Board has designated water quality objectives for waters of the San Diego Region as outlined in Chapter 3 of the Water Quality Control Plan (Plan). The water quality objectives are necessary to protect the existing and potential beneficial uses of each hydrologic unit as described in Chapter 2 of the Plan.

The project lies in the San Luis Rey hydrologic subarea, within the Lower San Luis 903.1 hydrologic unit that has the following existing and potential beneficial uses for inland surface waters, coastal waters, reservoirs and lakes, and ground water: municipal and domestic supply; agricultural supply; industrial process supply; industrial service supply; freshwater replenishment; hydropower generation; contact water recreation; non-contact water recreation; warm freshwater habitat; cold freshwater habitat; wildlife habitat; marine habitat; migration of aquatic organisms; and, rare, threatened, or endangered species habitat.

The project proposes the following potential sources of polluted runoff: construction activities associated with 4 single family dwellings. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed to reduce potential pollutants in runoff to the maximum extent practicable, such that the proposed project will not cause or contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses: silt fence, tarping during a rain event, street sweeping and vacuuming, stabilized construction entrance/exit, and gravel bag berms.

In addition, the proposed BMPs are consistent with regional surface water, storm water and groundwater planning and permitting process that has been established to improve the overall water quality in County watersheds. As a result, the project will not contribute to a cumulatively considerable exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses. Refer to Section VIII., Hydrology and Water Quality, Question b, for more information on regional surface water and storm water planning and permitting process.

d)	Substantially deplete groundwater supp groundwater recharge such that there w a lowering of the local groundwater table existing nearby wells would drop to a lev uses or planned uses for which permits	ould be levelowel	e a net deficit in aquifer volume or (e.g., the production rate of pre-ich would not support existing land

e)	Substantially alter the existing drainage through the alteration of the course of a result in substantial erosion or siltation of the course of a result in substantial erosion or siltation of the course of a result in substantial erosion or siltation of the course of	strear	m or river, in a manner which would
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The applicant proposes a 4-lot minor subdivision. As outlined in the Storm water Management Plan (SWMP) dated November 14, 2011 and prepared by Gary Lipska of Aquaterra Engineering, Inc., the project will implement the following site design measures, source control, and/or treatment control BMP's to reduce potential pollutants, including sediment from erosion or siltation, to the maximum extent practicable from entering storm water runoff: bioretention areas and rip-raps.

Incorporated

These measures will control erosion and sedimentation and satisfy waste discharge requirements as required by the Land-Use Planning for New Development and Redevelopment Component of the San Diego Municipal Permit (SDRWQCB Order No. R9-2007-0001), as implemented by the San Diego County Jurisdictional Urban Runoff Management Program (JURMP) and Standard Urban Storm Water Mitigation Plan (SUSMP). The SWMP specifies and describes the implementation process of all BMP's that will address equipment operation and materials management, prevent the erosion process from occurring, and prevent sedimentation in any onsite and downstream drainage swales. The Department of Public Works will ensure that the Plan is implemented as proposed. Due to these factors, it has been found that the project will not result in significantly increased erosion or sedimentation potential and will not alter any drainage patterns of the site or area on- or off-site. In addition, because erosion and sedimentation will be controlled within the boundaries of the project, the project will not contribute to a cumulatively considerable impact. For further information on soil erosion refer to VI., Geology and Soils, Question b.

f)	Substantially alter the existing drainage through the alteration of the course of a the rate or amount of surface runoff in a on- or off-site?	strear	m or river, or substantially increase

No Impact: No 100-year flood hazard areas were identified on the project site or off-site improvement locations; therefore, no impact will occur.

- 37 -

April 26, 2012

Discussion/Explanation:

Incorporated

i. SEICHE

No Impact: The project site is not located along the shoreline or topographically downgradient of a lake or reservoir; therefore, could not be inundated by a seiche.

No Impact

ii. TSUNAMI

No Impact: The project site is located more than a mile from the coast; therefore, in the event of a tsunami, would not be inundated.

iii. MUDFLOW

Less than Significant Impact: Mudflow is type of landslide. The site is located within an area with slopes greater than 25% in grade. The site is reportedly underlain by a thin layer of colluvium/residuum and bedrock and is vegetated. Unless the slopes were to become completely denuded in the event of a fire, mudflow from the slopes would not present a substantial risk to the planned building pad areas at the site. Therefore, it is not anticipated that the project will expose people or property to inundation due to a mudflow.

X. LAND USE AND PLANNING Would the project:					
a)					
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

b)	Conflict with any applicable land use pla jurisdiction over the project (including, b plan, local coastal program, or zoning o avoiding or mitigating an environmental	ut not rdinan	limited to the general plan, specific ce) adopted for the purpose of		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact		

Discussion/Explanation:

Less than Significant Impact: The proposed project is subject to the General Plan Regional Category Semi-Rural Lands and General Plan Land Use Designation Semi-Rural Residential (SR-2). Based on the density formula for slope dependent lands, the maximum density for this property is 4.74 dwelling units. The applicant has proposed 4 residential lots. Therefore, the project is consistent with the density limits/regulations/requirements of the General Plan. The project is subject to the policies of the Fallbrook Community Plan. The proposed project is consistent with the policies of the Fallbrook Community Plan since it is optimizing septic tanks. Policy LU 2.1.7 of the Fallbrook Community Plan states "limit the extent of sewer for new

subdivisions in accordance with General Plan Policy LU-14.4, Sewer Facilities, because sewer can induce growth and produce development that is out of character with Fallbrook's rural character." The project also complies with Policy LU 2.1.6 which states "require a minimum lot of one-half gross acre in the Semi-Rural and one acre in the Rural Lands Regional Categories". The current project lot sizes are 2 acre (net) in the Semi-Rural Regional Category. The project also complies with the scenic highway section of the Fallbrook Community Plan by preserving views along SR-76 and the agricultural goal since the lots are large enough to accommodate both residential and agricultural uses. The current zone is Limited Agricultural (A-70), which requires a net minimum lot size of 2 acres. The proposed project is consistent with the Zoning Ordinance requirements for minimum lot size.

<u>XI. IV</u>	<u>IINERAL RESOURCES</u> Would the proj	ect:	
a)	Result in the loss of availability of a know value to the region and the residents of		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discu	ssion/Explanation:		
Depar Class Regio Howe incom	than Significant Impact: The project site rtment of Conservation – Division of Mine ification: Aggregate Materials in the West on, 1997) as an area of "Potential Mineral ver, the project site is surrounded by resimpatible to future extraction of mineral reservance.	es and eern Sa Resou dential ources	Geology (Update of Mineral Land an Diego Production-Consumption urce Significance" (MRZ-3). I and agricultural sites which are son the project site. A future
neigh impac of a k	g operation at the project site would likely boring properties for issues such as noise ts. Therefore, implementation of the projects mown mineral resource that would be of very been lost due to incompatible land use	e, air q ect wil alue s	uality, traffic, and possibly other I not result in the loss of availability
b)	Result in the loss of availability of a local site delineated on a local general plan, s		•
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

No Impact: The project site is zoned Limited Agricultural (A-70), which is not considered to be an Extractive Use Zone (S-82) nor does it have an Impact Sensitive Land Use Designation (24) with an Extractive Land Use Overlay (25) (County Land Use

Element, 2000). Therefore, no potentially significant loss of availability of a known mineral resource of locally important mineral resource recovery (extraction) site delineated on a local general plan, specific plan or other land use plan will occur as a result of this project.

XII. NOISE -- Would the project result in:

,	Exposure of persons to or generation of established in the local general plan or r of other agencies?	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The project consists of a 4-lot subdivision located in the Fallbrook Community Plan area and will be occupied by a residential use. The project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, County of San Diego Noise Ordinance, and other applicable standards for the following reasons:

General Plan – Noise Element

The County of San Diego General Plan, Noise Element, Policy 4b addresses noise sensitive areas and requires an acoustical study to be prepared for any use that may expose noise sensitive areas to noise in excess of a Community Noise Equivalent Level (CNEL) of 60 decibels (dBA). Moreover, if the project is excess of CNEL 60 dB(A), modifications must be made to the project to reduce noise levels. Noise sensitive areas include residences, hospitals, schools, libraries or similar facilities where quiet is an important attribute. Project implementation is not expected to expose existing or planned noise sensitive areas to road, airport, heliport, railroad, industrial or other noise in excess of the CNEL 60 dB(A). This is based on staff's review of projected County noise contour maps (CNEL 60 dB(A) contours) and/or review by County Noise Specialist Emmet Aquino on December 14, 2010. The project consists of a four parcel subdivision located in the Fallbrook Community Plan area. The project subdivision is for residential use which is considered a noise sensitive land use (NSLU). Pursuant to the County Noise Element, Policy 4b, proposed and existing NSLU would be subject to an exterior sound level requirement of 60 dBA CNEL. Based on in-house GIS maps, the project is located approximately 1,576 feet north from Pala Road/SR-76 which is considered the nearest County Circulation Element roadway. Based on the County General Plan Update 2030 Volume Plot map, future traffic for this roadway segment would be 34,500 ADT. Due to attenuation by distance and the adequate separation from this roadway to the site, the project would be exposed to future traffic noise levels below the exterior 60 dBA CNEL requirement. The project traffic contributions to existing nearby roadways would be approximately 48 ADT (plus 12 ADT per proposed parcel). This traffic contribution is considered a minimal increase and the project does not introduce any direct or cumulative noise impacts to off-site sensitive receptors. Therefore, the project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, Noise Element.

Noise Ordinance – Section 36.404

Non-transportation noise generated by the project is not expected to exceed the standards of the County of San Diego Noise Ordinance (Section 36.404) at or beyond the project's property line. The site is zoned A70 that has a one-hour average daytime sound limit of 50 dBA. The adjacent properties are also zoned A70. Based on review by the County Noise Specialist Emmet Aquino on December 14, 2010, the project's noise levels are not anticipated to impact adjoining properties or exceed County Noise Standards, because the project does not involve any noise producing equipment that would exceed applicable noise levels at the adjoining property line.

Noise Ordinance – Section 36-410

The project will not generate construction noise that may exceed the standards of the County of San Diego Noise Ordinance (Section 36-410). Construction operations will occur only during permitted hours of operation pursuant to Section 36-410. Also, it is not anticipated that the project will operate construction equipment in excess of an average sound level of 75dB between the hours of 7 AM and 7 PM.

Aerial photos show that an existing single family residence is located adjacent to the north end of the project site. Typical construction equipment used for grading and preparing the site would involve a dozer, loader, back hoe and water truck. Two pieces of heavy equipment operating simultaneously would generate an estimated sound pressure level of 83 dBA at 50 feet. The centroid of the proposed pads is considered a representative noise source location associated with pad grading operations. Based on in-house noise calculations, the centroid of the pad on Parcel 1 (worst-case) is located approximately 140 feet from the northern property line. Utilizing a 100 % duty cycle (worst-case) for construction equipment operations at this distance, the construction noise levels would be 74 dBA at the northern property line. This is below the 75 dBA requirement. In addition, the project does not propose an impulsive type of operations such as drilling, materials processing on site, rock crushing, etc. Therefore, the project subdivision is consistent with the County Noise Ordinance, 36-410.

Finally, the project's conformance to the County of San Diego General Plan (Noise Element, Policy 4b) and County of San Diego Noise Ordinance (Section 36.404 and 36-410) ensures the project will not create cumulatively considerable noise impacts, because the project will not exceed the local noise standards for noise sensitive areas; and the project will not exceed the applicable noise level limits at the property line or construction noise limits, derived from State regulation to address human health and quality of life concerns. Therefore, the project will not contribute to a cumulatively considerable exposure of persons or generation of noise levels in excess of standards established in the local general plan, noise ordinance, and applicable standards of other agencies.

b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Discussion/Explanation:

Less than Significant Impact: The project involves the following permanent noise sources that may increase the ambient noise level: vehicular traffic on nearby roadways and activities associated with a residential subdivision. As indicated in the response listed under Section XI Noise, Question a., the project would not expose existing or planned noise sensitive areas in the vicinity to a substantial permanent increase in noise levels that exceed the allowable limits of the County of San Diego General Plan, County of San Diego Noise Ordinance, and other applicable local, State, and Federal noise control.

Also, the project is not expected to expose existing or planned noise sensitive areas to direct noise impacts based on a review of the project by County Noise Specialist Emmet Aquino on December 14, 2010. The project traffic contributions to existing nearby roadways would be approximately 48 ADT (plus 12 ADT per proposed parcel). This traffic contribution is considered a minimal increase and the project does not introduce any direct noise impacts to off-site sensitive receptors. The project will not result in cumulatively noise impacts because a list of past, present and future projects within in the vicinity were evaluated. It was determined that the project in combination with a list of past, present and future project would not expose existing or planned noise sensitive areas to cumulative noise impacts. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

d)	A substantial temporary or periodic increvicinity above levels existing without the	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The project does not involve any uses that may create substantial temporary or periodic increases in ambient noise levels in the project vicinity including but not limited to extractive industry; outdoor commercial or industrial uses that involve crushing, cutting, drilling, grinding, or blasting of raw materials; truck depots, transfer stations or delivery areas; or outdoor sound systems.

General construction noise is not expected to exceed the construction noise limits of the County of San Diego Noise Ordinance (Section 36-410), which are derived from State regulations to address human health and quality of life concerns. Construction operations will occur only during permitted hours of operation pursuant to Section 36-410. Also, it is not anticipated that the project will operate construction equipment in excess of 75 dB for more than an 8 hours during a 24-hour period.

Aerial photos show that an existing single family residence is located adjacent to the north of the project site. Typical construction equipment used for grading and preparing the site would involve a dozer, loader, back hoe and water truck. Two pieces of heavy equipment operating simultaneously would generate an estimated sound pressure level of 83 dBA at 50 feet. The centroid of the proposed pads is considered a representative noise source location associated with pad grading operations. Based on in-house noise calculations, the centroid of the pad on Parcel 1 (worst-case) is located approximately 140 feet from the northern property line. Utilizing a 100 % duty cycle (worst-case) for construction equipment operations at this distance, the construction noise levels would be 74 dBA at the northern property line. This is below the 75 dBA requirement. In addition, the project does not propose an impulsive type of operations such as drilling, materials processing on site, rock crushing, etc. Therefore, the project

Less than Significant Impact

No Impact

	not result in a substantial temporary or periodic increase in existing ambient noise in the project vicinity.
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Discussion/Explanation:

Incorporated

Potentially Significant Impact

Less Than Significant With Mitigation

No Impact: The proposed project is not located within a Comprehensive Land Use Plan (CLUP) for airports or within 2 miles of a public airport or public use airport. Therefore, the project will not expose people residing or working in the project area to excessive airport-related noise levels.

f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

□ Potentially Significant Impact
 □ Less than Significant Impact
 □ Incorporated
 □ Less than Significant Impact
 □ No Impact

Discussion/Explanation:

No Impact: The proposed project is not located within a one-mile vicinity of a private airstrip; therefore, the project will not expose people residing or working in the project area to excessive airport-related noise levels.

XIII. POPULATION AND HOUSING -- Would the project:

a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

 Potentially Significant Impact	 Less than Significant Impact
Less Than Significant With Mitigation Incorporated	No Impact

Discussion/Explanation:

No Impact: The proposed project will not induce substantial population growth in an area because the project does not propose any physical or regulatory change that would remove a restriction to or encourage population growth in an area including, but limited to the following: new or extended infrastructure or public facilities; new

commercial or industrial facilities; large-scale residential development; accelerated conversion of homes to commercial or multi-family use; or regulatory changes including General Plan amendments, specific plan amendments, zone reclassifications, sewer or water annexations; or LAFCO annexation actions.

	i. Fire protection?ii. Police protection?iii. Schools?iv. Parks?v. Other public facilities?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

No Impact: Based on the service availability forms received for the project, the proposed project will not result in the need for significantly altered services or facilities. Service availability forms have been provided which indicate existing services are available to the project from the following agencies/districts: Rainbow Municipal Water District, North County Fire Protection District, Bonsall Union School District, and Fallbrook Union School District. The project does not involve the construction of new or physically altered governmental facilities including but not limited to fire protection facilities, sheriff facilities, schools, or parks in order to maintain acceptable service ratios, response times or other performance service ratios or objectives for any public Therefore, the project will not have an adverse physical effect on the environment because the project does not require new or significantly altered services or facilities to be constructed.

XV. a)	\ C	ECREATION Yould the project increase the use of expression of the recreational facilities such that acility would occur or be accelerated?	_	• • • • • • • • • • • • • • • • • • • •
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation:

Less than Significant Impact: The project involves a 4-lot residential subdivision that will increase the use of existing neighborhood and regional parks or other recreational facilities. To avoid substantial physical deterioration of local recreation facilities the project will be required to pay fees or dedicate land for local parks to the County pursuant to the Park Land Dedication Ordinance (PLDO). The Park Land Dedication Ordinance (PLDO) is the mechanism that enables the funding or dedication of local parkland in the County. The PLDO establishes several methods by which developers may satisfy their park requirements. Options include the payment of park fees, the dedication of a public park, the provision of private recreational facilities, or a combination of these methods. PLDO funds must be used for the acquisition, planning, and development of local parkland and recreation facilities. Local parks are intended to serve the recreational needs of the communities in which they are located. The proposed project opted to pay park fees. Therefore, the project meets the requirements set forth by the PLDO for adequate parkland dedication and thereby reducing impacts. including cumulative impacts to local recreational facilities. The project will not result in significant cumulative impacts, because all past, present and future residential projects are required to comply with the requirements of PLDO. Refer to XVIII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

b)

With regard to regional recreational facilities, there are over 21,765 acres of regional parkland owned by the County, which exceeds the General Plan standard of 15 acres per 1,000 population. In addition, there are over one million acres of publicly owned land in San Diego County dedicated to parks or open space including Federal lands, State Parks, special districts, and regional river parks. Due to the extensive acreage of existing publicly owned lands that can be used for recreation, the project will not result in substantial physical deterioration of regional recreational facilities or accelerate the deterioration of regional parkland. Moreover, the project will not result in a cumulatively considerable deterioration or accelerated deterioration of regional recreation facilities because even with all past, present and future residential projects a significant amount of regional recreational facilities will be available to County residents.

b)	Does the project include recreational face expansion of recreational facilities, which on the environment?		•
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

const expar	npact: The project does not include recreation or expansion of recreational facilities cannot have onment.	ies. T	herefore, the construction or
XVI. a)	TRANSPORTATION AND TRAFFIC V Conflict with an applicable plan, ordinar effectiveness for the performance of the all modes of transportation including marelevant components of the circulation s intersections, streets, highways and free mass transit?	ice or period of the circul ass transfer of the circular of th	policy establishing measures of the ation system, taking into account nsit and non-motorized travel and including but not limited to
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Discussion/Explanation: The County of San Diego Guidelines for Determining Significance for Traffic and Transportation (Guidelines) establish measures of effectiveness for the performance of the circulation system. These Guidelines incorporate standards from the County of San Diego Public Road Standards and Public Facilities Element (PFE), the County of San Diego Transportation Impact Fee Program and the Congestion Management Program.

Less than Significant Impact: The proposed project will result in an additional 48 ADT. However, the project will not have a direct impact related to a conflict with any performance measures establishing measures of effectiveness of the circulation system because the project trips do not exceed any of the County's Guidelines for Determining Significance for direct impacts related to Traffic and Transportation. As identified in the County's Guidelines for Determining Significance for Traffic and Transportation, the project trips would not result in a substantial increase in the number of vehicle trips, volume of capacity ratio on roads, or congestion at intersections in relation to existing conditions. In addition, the project would not conflict with policies related to non-motorized travel such as mass transit, pedestrian or bicycle facilities. Therefore, the project would not have a direct impact related to a conflict with policies establishing measures of the effectiveness for the performance of the circulation system.

The proposed project generates 48 ADT. These trips will be distributed on circulation element roadways in the County some of which currently or are projected to operate at inadequate levels of service. The County of San Diego has developed an overall programmatic solution that addresses existing and projected future road deficiencies in the unincorporated portion of San Diego County. The TIF program creates a mechanism to proportionally fund improvements to roadways necessary to mitigate potential cumulative impacts caused by traffic from future development. These new projects were based on SANDAG regional growth and land use forecasts, the SANDAG Regional Transportation Model was utilized to analyze projected build-out (year 2030) development conditions on the existing circulation element roadway network throughout the unincorporated area of the County. Based on the results of the traffic modeling, funding necessary to construct transportation facilities that will mitigate cumulative impacts from new development was identified. Existing roadway deficiencies will be corrected through improvement projects funded by other public funding sources, such as TransNet, gas tax, and grants. Potential cumulative impacts to the region's freeways have been addressed in SANDAG's Regional Transportation Plan (RTP). This plan, which considers freeway buildout over the next 30 years, will use funds from TransNet, State, and Federal funding to improve freeways to projected level of service objectives in the RTP.

These project trips therefore contribute to a potential significant cumulative impact and mitigation is required. The potential growth represented by this project was included in the growth projections upon which the TIF program is based. By ensuring TIF funds are spend for the specific roadway improvements identified in the TIF Program, the CEQA mitigation requirement is satisfied and the Mitigation Fee nexus is met. Therefore, payment of the TIF, which will be required at issuance of building permits, in combination with other components of the program described above, will mitigate potential cumulative traffic impacts to less than significant.

b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

No Impact

Less Than Significant With Mitigation

Incorporated

Discussion/Explanation:

Less than Significant Impact: The proposed project will not significantly alter roadway geometry on SR 76. A safe and adequate sight distance shall be required at all driveways and intersections to the satisfaction of the Director of the Department of Public Works. All road improvements will be constructed according to the County of San Diego Public and Private Road Standards. The proposed project will not place incompatible uses (e.g., farm equipment) on existing roadways. Therefore, the proposed project will not significantly increase hazards due to design features or incompatible uses.

•	•	ed project will not significantly increase latible uses.	hazar	ds due to design features or

Discussion/Explanation:

local public agency.

Incorporated

Less than Significant: The proposed project is a 4-lot minor subdivision and will generate 48 ADT. Project implementation will not result in the construction of any road improvements or new road design features that would interfere with the provision of public transit, bicycle or pedestrian facilities. In addition, the project does not generate sufficient travel demand to increase demand for transit, pedestrian or bicycle facilities. Therefore, the project will not conflict with policies, plans, or programs regarding public transit, bicycle or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

XVII. UTILITIES AND SERVICE SYSTEMS -- Would the project:

a)	Exceed wastewater treatment requirem Quality Control Board?	ents of	f the applicable Regional Water
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
Discus	ssion/Explanation:		

Less than Significant Impact: The project proposes to discharge domestic waste to on-site wastewater systems (OSWS), also known as septic systems. The project proposes a 4-lot residential subdivision which will rely on on-site wastewater systems (septic systems). Discharged wastewater must conform to the Regional Water Quality Control Board's (RWQCB) applicable standards, including the Regional Basin Plan and the California Water Code. California Water Code Section 13282 allows RWQCBs to authorize a local public agency to issue permits for OSWS "to ensure that systems are

the California Water Code. California Water Code Section 13282 allows RWQCBs to authorize a local public agency to issue permits for OSWS "to ensure that systems are adequately designed, located, sized, spaced, constructed and maintained." The RWQCBs with jurisdiction over San Diego County have authorized the County of San Diego, Department of Environmental Health (DEH) to issue certain OSWS permits throughout the County and within the incorporated cities. DEH has reviewed the OSWS lay-out for the project pursuant to DEH, Land and Water Quality Division's, "On-site Wastewater Systems: Permitting Process and Design Criteria." DEH approved the project's OSWS on December 22, 2011. Therefore, the project is consistent with the wastewater treatment requirements of the RWQCB as determined by the authorized,

b)	Require or result in the construction facilities or expansion of existing fac significant environmental effects?		
	Potentially Significant Impact	\boxtimes	Less than Significant Impact

No Impact

Less Than Significant With Mitigation

c

Discussion/Explanation:

Less than Significant Impact: The project does not include new or expanded water or wastewater treatment facilities. In addition, the project does not require the construction or expansion of water or wastewater treatment facilities. Based on the service availability forms received, the project will not require construction of new or expanded water or wastewater treatment facilities. Service availability forms have been provided which indicate adequate water and/or wastewater treatment facilities are available to the project from the following agencies/districts: Rainbow Municipal Water District. Therefore, the project will not require any construction of new or expanded facilities, which could cause significant environmental effects.

Require or result in the construction of new storm water drainage facilities or

O)	expansion of existing facilities, the construction of which could cause significant environmental effects?			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discussion/Explanation:				
No Impact: The project does not include new or expanded storm water drainage facilities. Refer to the Storm water Management Plan dated November 14, 2011 and Drainage Study dated November 19, 2011 for more information.				
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	
Discus	ocion/Evalenation:			

Discussion/Explanation:

Less than Significant Impact:

The project requires water service from the Rainbow Municipal Water District. A Service Availability Letter from the Rainbow Municipal Water District has been provided, indicating adequate water resources and entitlements are available to serve the requested water resources. Therefore, the project will have sufficient water supplies available to serve the project.

e) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

	Potentially Significant Impact Less Than Significant With Mitiga Incorporated	ition 🗌	Less than Significant Impact No Impact
Discuss	sion/Explanation:		

Less than Significant Impact: Implementation of the project will generate solid waste. All solid waste facilities, including landfills require solid waste facility permits to operate. In San Diego County, the County Department of Environmental Health, Local Enforcement Agency issues solid waste facility permits with concurrence from the California Integrated Waste Management Board (CIWMB) under the authority of the Public Resources Code (Sections 44001-44018) and California Code of Regulations Title 27, Division 2, Subdivision 1, Chapter 4 (Section 21440et seq.). The project will

deposit all solid waste at a permitted solid waste facility and therefore, will comply with Federal, State, and local statutes and regulations related to solid waste.

XVIII. MANDATORY FINDINGS OF SIGNIFICANCE:

a)	Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?
	Potentially Significant Impact
Discus	ssion/Explanation:
Study, habita sustail or rest examp respor specificumulars our cesour	pact: Per the instructions for evaluating environmental impacts in this Initial the potential to degrade the quality of the environment, substantially reduce the t of a fish or wildlife species, cause a fish or wildlife population to drop below selfning levels, threaten to eliminate a plant or animal community, reduce the number rict the range of a rare or endangered plant or animal or eliminate important bles of the major periods of California history or prehistory were considered in the nee to each question in sections IV and V of this form. In addition to project ic impacts, this evaluation considered the projects potential for significant ative effects. There is no substantial evidence that there are biological or cultural rees that are affected or associated with this project. Therefore, this project has determined not to meet this Mandatory Finding of Significance.
b)	Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated Less than Significant Impact No Impact

Discussion/Explanation:

The following list of past, present and future projects were considered and evaluated as a part of this Initial Study:

PROJECT NAME	PERMIT/MAP NUMBER
Monserate Minor Subdivision	3200 21156 (TPM)
Granger Minor Subdivision	3200 20610 (TPM)

Pepper Drive Minor Subdivision	3200 20648 (TPM)
Bridge Pac West I Minor Subdivision	3200 20841 (TPM)
Gray Minor Subdivision	3200 20503 (TPM)
Evans Minor Subdivision	3200 20491 (TPM)
Sumac Minor Subdivision	3200 21076 (TPM)
West Lilac Ranch Major Subdivision	3100 5276 (TM)
Rancho De Oro Major Subdivision	3100 4689 (TM)
Pala Mesa Major Subdivision	3100 5187 (TM)
Lee and Karen Brown Minor Subdivision	3200 20614 (TPM)

Per the instructions for evaluating environmental impacts in this Initial Study, the potential for adverse cumulative effects were considered in the response to each question in sections I through XVIII of this form. In addition to project specific impacts, this evaluation considered the projects potential for incremental effects that are cumulatively considerable. As a result of this evaluation, there is no substantial evidence that there are cumulative effects associated with this project. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.

c)		oes the project have environmental effects, which will cause substantial dverse effects on human beings, either directly or indirectly?			
]	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

Discussion/Explanation:

In the evaluation of environmental impacts in this Initial Study, the potential for adverse direct or indirect impacts to human beings were considered in the response to certain questions in sections I. Aesthetics, III. Air Quality, VI. Geology and Soils, VIII. Hazards and Hazardous Materials, IX Hydrology and Water Quality XII. Noise, XIII. Population and Housing, and XVI. Transportation and Traffic. As a result of this evaluation, there is no substantial evidence that there are adverse effects on human beings associated with this project. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.
